

Paul John Butad

AI Engineer | Agentic Systems | LLM Evaluation

Antipolo, Philippines · butadpj@gmail.com · 09508767559

AI engineer building agentic systems, LLM evaluations, and learning products. Deployed evaluations that reduced production AI chat regressions by 90%. Founder of Egoist Labs, building AI-assisted curriculum authoring and differentiated learning workflows.

Relevant Experience

Fullstack Developer | PioneerDev.AI

03/2025–03/2026

- Architected and scaled an agentic AI system with serverless, event-driven pipelines for image processing.
- Deployed an LLM-as-a-judge evaluation framework that reduced production AI chat regressions by 90%.
- Built CI/CD pipelines and automated integration tests for AI development, increasing feature deployment velocity by 4x.

Founder | Egoist Labs

12/2025–Present

- Integrated AI into differentiated lesson planning and task assignment, reducing one mentor's preparation time for five learners from a full day to 20–30 minutes.
- Built Capability Studio for skill-based curriculum authoring, connecting expert feedback with AI regeneration to support updates for each 3–6-month cohort.
- Built progress dashboards to identify learners who may be stuck for two weeks, helping mentors prioritize support before monthly reviews.

Backend Engineer | Prosple

08/2025–Present

- Led the redesign of a mission-critical system, reducing costs by 50%; selected the technology stack and defined architectural standards.
- Standardized production logging to improve system diagnostics and support incident recovery.

Frontend Engineer | Prosple

02/2025–08/2025

- Built a design system and automated staging workflows to simplify feature development and deployment.
- Implemented testing abstractions and advocated test-driven development, reducing regression bugs by 50%.

Front-end Web Developer | Quantrics Enterprises Inc.

08/2022–02/2025

- Led test automation for legacy QA workflows, reducing manual regression testing time by 80%.

Technical Skills

AI systems: Agentic systems, serverless image-processing pipelines, AI-integrated learning workflows

Evaluation and delivery: LLM-as-a-judge, AI regression testing, integration testing, CI/CD

Languages and frameworks: Python, TypeScript, JavaScript, Go, Node.js, Django, React, Next.js

Cloud and data: AWS, GCP, PostgreSQL, MongoDB, Redis, MemoryDB, OpenSearch

Education

Information and Communication Technology (ICT)

AMA Computer College East Rizal · 07/2018–04/2020 · Antipolo, Philippines
